

# Hydraulic FLOW CONTROL and REDUCING PRESSURE kit

**FUNCTION:** It allows limiting a flow by the hydraulic valve, according to the spring rate of the differential pilot, proportional to the load loss created in the orifice plate or reduce the pressure downstream of the valve steadily, according to the calibration of the controller driver.

- 1- Hydraulic valve
- 2- Strainer
- 3- REATON®
- 4- PRAL®
- 5- KATAL®
- 6- Orifice plate
