

LINE DESIGN HYDRAULIC VALVES

- ✓ **PATENT MODEL:** Perimeter ring in the platform of the valve body which avoid the diaphragm displacement.
- ✓ **ACCESS AND MAINTENANCE:** It allows an easy access to the inner part of the valve only manipulating the screws between covers and bodies.
- ✓ **POSITION:** Horizontal or vertical position of the valve, does not affect the operation or hydraulic specifications of the product.

SPECIFICATIONS

COMETAL hydraulic valves comply with the specifications of the standards **UNE - EN 1074** about valves for the supply of water with reference to **general requirements, mechanical resistance and watertightness.**

When the sum of the Control Chamber powers is less than the upstream pressure, the valve will open.

When the sum of the Control Chamber powers is higher or equal than the upstream pressure, the valve will close.

When the Control Chamber is partially full, the valve can be opening, closing or regulating.
